

## INTRODUCTION

Inventory management software is a computer-based system for tracking inventory levels, orders, sales and deliveries. It can also be used in the manufacturing industry to create a work order, bill of materials and other production-related documents.

The Inventory Management system will be capable to automate all inventory, and stock related activities. This system will provide options to maintain products, customer, customer order, purchase order, payment receive from customer, payment to supplier, issuing and receiving of stocks, transfer stocks from one warehouse to another warehouse, generating various inventory related reports.

## SCOPE AND UTILITY

Existing system for managing inventory and stocks works on manual process where record maintenance is not a easy task. In this method it is hard to retrieve older records and there are chances of loosing data. Using this new inventory management system, it can solve all the above problems and provide secure and user friendly application.

## BENEFITS AND FUTURE SCOPE

- Database for different products range and storage an be provided.
- Manages And Track Sales
- Manages Customer and Supplier Contacts
- Manages Accounts
- Track Product Features
- Daily Sales, Monthly Sales, Sales By Date Can be generated
- Manage and Track Payment Details
